Problem Statement

1. The problem statement is to design a college prediction/ prediction system and to provide a probabilistic insight into college administration for overall rating, cut-offs of the colleges, admission intake and preferences of students.
2. It has always been a troublesome process for students in finding the perfect university and course for their further studies.
3. At times they do know which stream they want to get into, but it is not easy for them to find colleges based on their academic marks and other performances.
4. We aim to develop and provide a place which would give a probabilistic output of how likely it is to get into a university given their details.

Abstract:

- Students are often worried about their chances of admission to University.
- The aim of this project is to help students in shortlisting universities with their profiles.
- The predicted output gives them a fair idea about their admission chances to a particular university.
- This analysis should also help students who are currently preparing or will be preparing to get a better idea.

ALGORITHM:
