Solution Architecture

| Team ID	PNT2022TMID34646
Project Name	Project - University Admit Eligibility Predictor

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- · Find the best tech solution to solve existing business problems.
- · Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- · Define features, development phases, and solution requirements.
- · Provide specifications according to which the solution is defined, managed, and delivered.
